WHAT IF . . . ? REVISIONS TO TREND ESTIMATES

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraph 28 of the Explanatory Notes).

Generally it is only the last three trend estimates that are subject to noticeable degrees of revision, with the last estimate experiencing the greatest revision. An analysis of how sensitive the current trend estimates are to additional data can be helpful.

Some scenarios that may be considered in a 'what if' analysis include:

- What revision would happen to the current trend point if next month's seasonally adjusted figure grew (or fell) by a typical amount, for example the average monthly percentage growth (or fall)?
- What value must next month's seasonally adjusted figure be to result in zero trend growth between the current trend value (when revised) and next month's trend estimate?

An example of such an analysis for trend estimates of employment and unemployment rate for Australia can be found in the monthly publication *The Labour Force, Australia, Preliminary* (6202.0).

NEW SPECIAL DATA SERVICE Now available are 'What if?' analyses of the effect of new seasonally adjusted estimates on trend estimates for:

- Employment NSW
- Unemployment rate NSW
- Employment ACT
- Unemployment rate ACT.

This analysis is available on a monthly basis as a special data service. For details of this new product, please contact Valda McSorley, Social and Labour Statistics Unit, ABS on Sydney (02) 268 4386.

For further information on trend revisions, contact the Assistant Director, Time Series Analysis, ABS on Canberra (06) 252 6345.

SUMMARY OF FINDINGS NEW SOUTH WALES

TREND ESTIMATES

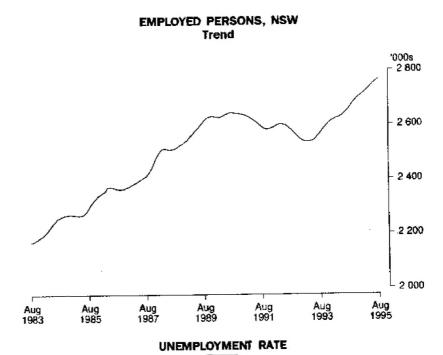

The trend estimate of **employed** people in NSW has been increasing since March 1993 and in August 1995 stood at 2 766 500. This was 9.1% higher than the March 1993 trough.

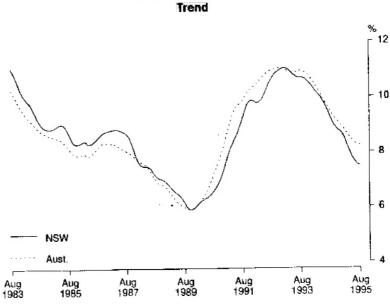

The trend estimate of **unemployed** people reached a peak of 315 400 in January 1993 and has been generally falling since then. In August 1995 the trend estimate was 224 400 (29% below the January 1993 peak).

The trend unemployment rate reached a peak of 11.0% in the period December 1992 to March 1993 and has been falling since then. In August 1995 the rate was 7.5%, the lowest since December 1990.

The trend series participation rate was 62.2% in August 1995 compared to 61.7% in August 1994.

The labour force trend estimate has been rising since April 1993 and in August 1995 was 2 991 000 (5.0% above the April 1993 trough).

SEASONALLY ADJUSTED **ESTIMATES**

Employment stood at 2 765 900 in NSW in August 1995. This was 117 200 (4.4%) higher than a year ago.

The number of unemployed people was estimated at 235 000 in August 1995. This was 6.6% higher than in July but 29 500 (11.2%) lower than a year ago. Males represented 59% of the unemployed this August, the same as a year ago.

The unemployment rate rose from 7.4% in July 1995 to 7.8% in August. This compared to a rate of 9.1% in August of last year. The rate was 8.0% for males and 7.6% for females in August 1995.

The participation rate stood at 62.4% in August, with a rate of 72.7% for males and 52.5% for females.

In August 1995 the size of the labour force was estimated at 3 001 000 people. This was 3.0% higher than a year ago.

REGIONS OF NSW

While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level - and are thus based on a considerably smaller sample size - they are subject to higher relative standard errors. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on page 47-52 of this publication.

Sydney

In August 1995 the estimate of the number of people employed in the Sydney Major Statistical Region (MSR) was 1 778 300. This was 1.1% lower than the previous month but 1.8% higher than in August 1994.

The unemployment rate was 6.9% in August 1995 compared to 7.7% last August. The rate was 7.3% for males and 6.5% for females.

The unemployment rates within Sydney MSR varied from 15.8% in Fairfield-Liverpool Statistical Region (SR) to 2.8% in St George-Sutherland SR.

The participation rate for Sydney MSR was 63.3% overall with a rate of 73.4% for males and 53.7% for females. Rates varied from 50.0% in Gosford-Wyong SR to 69.6% in Outer Western Sydney SR.

Balance of NSW

The number of **employed** people in this area of NSW has been steady in the last three months and in August was 973 200. This was an increase of 9.6% over the past year. Part-time workers accounted for about half this increase.

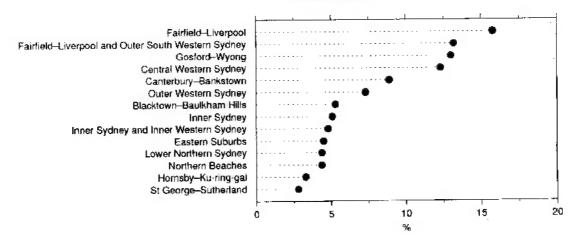

The unemployment rate in August was 8.8% compared to 8.0% in July and 11.0% in August last year.

The unemployment rate varied from 5.9% in Murray-Murrumbidgee SR to 13.0% in Illawarra SR and Wollongong SRS.

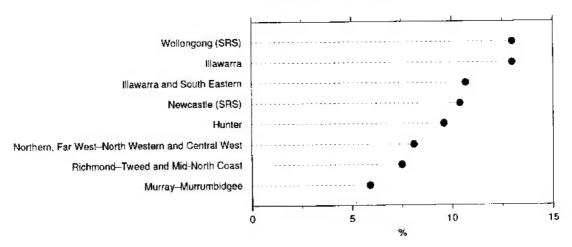

The participation rate for the Balance of NSW MSR was 59.6% in August 1995. The rate was 70.2% for males and 49.4% for females.

UNEMPLOYMENT RATE, REGIONS OF NSW, AUGUST 1995

Sydney MSR

Balance of NSW MSR

AGE

Most unemployment rates by age group, having fallen during the year, showed an increase in August. The exceptions were the 45–54 year olds where the rate has been steady in the last quarter and the 55 years and over group where the rate has continued to fall in recent months.

In August 1995 the rates were highest for 15–19 year olds (19.2%) and 20–24 year olds (10.7%) and lowest for 45–54 year olds (4.3%). The 15–19 unemployment rate was the same as 12 months ago while the 20–24 rate decreased from 12.8%.

Part-time workers represented an estimated 23% of all employed people in August 1995, but this proportion varied between the age groups. The highest levels were among those aged 15–19 years with 60% and those aged 65 years and over with 52%. An estimated 34% of 15–19 year olds were looking for part-time work.

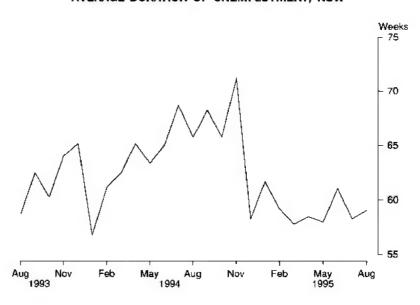

DURATION OF UNEMPLOYMENT

In August 1995 the **long term unemployed** (people unemployed 52 weeks and over) represented 34% of all unemployed people. This compared with 39% a year earlier.

The average duration of unemployment was 59 weeks in August 1995 compared to 66 weeks the previous August.

Average duration of unemployment increased with age reaching an average of 99 weeks for people aged 45 years and over.

AVERAGE DURATION OF UNEMPLOYMENT, NSW

INDUSTRY AND OCCUPATION

The industries with the largest number of employees in NSW in August 1995 were *Retail trade* with 386 100 (or 14% of the total) and *Manufacturing* with 367 700 (13%).

Manufacturing employed the largest number of people in Sydney MSR with 14% of the total while Retail trade had the largest number in Balance of NSW MSR with 15%.

The largest occupation group in NSW was Clerks with 488 900 employees (18% of the total) followed by Salespersons and personal service workers (17%). Clerks were also the largest occupation group in Sydney MSR with 20% of the total while Labourers and related workers were the largest group in Balance of NSW MSR with 18%.

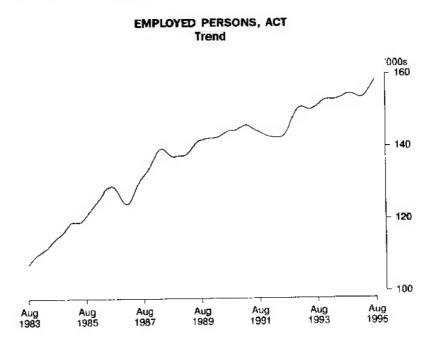

Between August 1994 and August 1995, the majority of occupation groups showed increases in employment. The largest increase occurred in Salespersons and personal service workers (13%).

SUMMARY OF FINDINGS AUSTRALIAN CAPITAL TERRITORY

Note: Seasonally adjusted estimates are not available for the ACT.

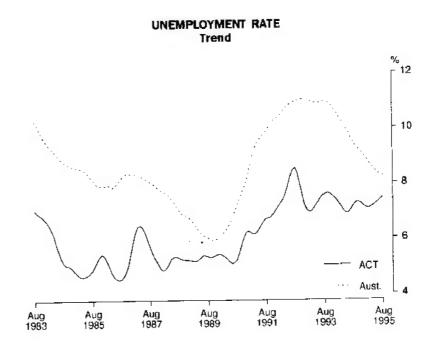

TREND ESTIMATES

The trend estimate of the number of **employed** people in the ACT has been increasing in the six months since February 1995 and in August was 158 500. This was the highest level that this series had reached and was 3.2% above the February figure.

Unemployment in the ACT has been increasing slowly since March 1995 and was estimated at 12 800 in August. The highest unemployment level of 13 500 occurred in the ACT in August 1992.

The trend unemployment rate has shown a small rise in 1995 and stood at 7.5% in August. The highest unemployment rate of 8.5% occurred in the ACT in July-August 1992. The unemployment rate was 8.6% for males and 6.1% for females in August 1995.

The participation rate has been increasing since March 1995 and in August was 74.2%, the highest figure on record. This was 2.1 percentage points above the level in March. The ACT labour force estimate was 171 300 in August.

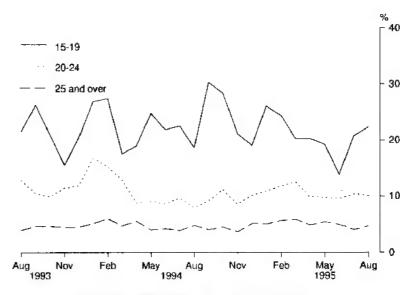

In August 1995 the unemployment rate in the ACT was highest (22.4%) for people aged 15–19 years. The rate was 10.1% for people aged 20–24 years and 4.7% for those aged 25 years and over.

About four-fifths of 15-19 year olds were working part-time, while approximately half of the unemployed in this age group were looking for part-time work. 15-19 year olds worked an average of 17 hours per week.

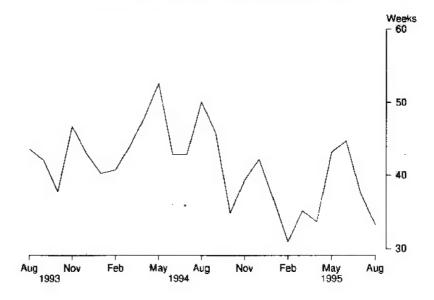

Approximately 70% of employed 20–24 year olds and 80% of people aged 25 years and over worked full-time. On average 20–24 year olds worked 32 hours per week and those aged 25 years and over worked 37 hours per week.

The highest participation rate was 85.4% for those aged 20-24 years and the lowest was 63.3% for those aged 15-19 years.

UNEMPLOYMENT RATE BY AGE, ACT

AVERAGE DURATION OF UNEMPLOYMENT, ACT

AGE

DURATION OF UNEMPLOYMENT

In August 1995 the average duration of unemployment in the ACT was 33 weeks. The highest average was for people aged 25 years and over (43 weeks) and the lowest (19 weeks) for 15-19 year olds.

The long term unemployed (people unemployed 52 weeks and over) represented 21% of all unemployed people in August 1995. This was lower than a year ago when it was 33%.

INDUSTRY AND OCCUPATION

In August 1995, about a quarter of all employed people in the ACT were employed in Government administration and defence and a further 14% were in Retail trade.

Of all employed females, 23% worked in Government administration and defence, 15% worked in Health and community services and 14% in Retail trade.

The largest occupation groups were Clerks and Professionals both with 21% of employed people. Professionals were the largest group for males with 22% and Clerks the largest group for females with 35%.

NOTE

This publication contains estimates of the civilian labour force in NSW and the ACT derived from the Labour Force Survey component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on Page 42.

Care should be taken in the interpretation of month-to-month movements in estimates. Survey estimates are subject to sampling and non-sampling variability as explained in the Technical note on Data Reliability on page 47.

Gregory W. Bray Deputy Commonwealth Statistician

⁽a) While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard error. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on pages 43-47 of this publication. (b) Previously Manly-Warringah (SR). (c) Excludes components of Far West (SD). These are published as part of Balance of NSW (MSR).

LONG TERM UNEMPLOYED AS A PROPORTION OF TOTAL UNEMPLOYED, ACT

LABOUR FORCE SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time.

The principal results from the labour force supplementary surveys are released in The Labour Force, Australia (6203.0). Additional data are available as a Standard Data Service released at the same time, including tables formerly included in the supplementary publications. Equivalent tables at the State level are still available on microfiche. In addition, other unpublished data can be provided to meet special requirements.

Recent issues of The Labour Force, Australia contain the principal results of the following supplementary surveys:

June 1995 issue

Labour Force Experience, Australia, February 1995

August 1995 issue

Labour Force Status and Other Characteristics of Families, Australia, June 1995

Standard Data Service

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

THE POPULATION SURVEY

2 This survey consists of the labour force survey (LFS) and, in most months, one or more supplementary topics: The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than 0.5% of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

SCOPE

- 3 The labour force survey includes all persons aged 15 years and over. except:
- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

SURVEY SAMPLE REDESIGN

- 4 Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.
- 5 For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place.

POTENTIAL EFFECTS ON LABOUR FORCE SURVEY **ESTIMATES**

- 6 Implications for estimates produced from the LFS due to sample redesign and its implementation are as follows.
- (a) The sampling error overall increased initially by about 7% over the previous level but will decline gradually during the life of the new sample. For State estimates, the initial increase was about 8%, while for the Territories, there was a decrease of 19%. There were also higher standard errors for movements produced over the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. Overall, these were estimated to be up to 20% higher than the normal standard errors on monthly movements.
- (b) Analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in the sample does not change significantly. However, during the transition period, there were twice as many people as

usual in the sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

- 7 For further information, see Information Paper: Labour Force Survey Sample Design (6269.0).
- 8 The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International labour Office (ILO), relate only to those persons within the scope of the survey.
- 9 Employed persons comprise all civilians aged 15 years and over who, during the reference week:
- (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.
- 10 Prior to April 1986, unpaid family helpers who worked for 1 to 14 hours were excluded from the category of employed persons.
- 11 Employed persons can be classified into:
- (a) full-time workers (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
- (b) part-time workers (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).
- 12 Unemployed persons are all those aged 15 years and over who were not employed during the reference week, and:
- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or

- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
- 13 Actively looking for work includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
- 14 The unemployment rate for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
- 15 The labour force comprises all persons who, during the reference week, were employed or unemployed as defined above.
- 16 Long term unemployed comprises persons unemployed for a period of 52 weeks or more.
- 17 Persons not in the labour force are those who, during the reference week, were not in the categories employed or unemployed as defined above.
- 18 The labour force participation rate for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
- 19 Duration of unemployment is the period from the time the person began looking for work or was stood down to the end of the reference week.
- 20 Unemployed persons classified by industry and occupation. Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
- 21 Industry classification. From August 1994, Iabour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0). For further information about the application of ANZSIC to Labour Force Survey data, see Information Paper Labour Force Survey: Introduction of ANZSIC for industry data (6259.0).
- 22 Occupation classification. Occupation data are presented in accordance with the Australian Standard Classification of Occupations (ASCO) (1221.0 and 1222.0).
- 23 Marital status. In the labour force survey, persons are classified as married or not married. Persons are classified as married if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey
- 24 Persons attending school or a tertiary educational institution. Persons attending school comprise those aged 15-19 years who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15-24 years who were enrolled full-time at universities, colleges of advanced

education, technical colleges, colleges of technical and further education, and theological colleges.

25 Employment/population ratio. For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.

STATISTICAL AREAS

26 The regional structure for NSW used in tables 16–19 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 48–50 and the publications Regional Statistics, New South Wales (1304.1) and Australian Standard Geographical Classification (1216.0).

SEASONAL ADJUSTMENT AND TREND ESTIMATION

- 27 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:
- (a) Employment: 5 in 10 monthly movements
- (b) Unemployment: 7 in 10 monthly movements
- (c) Unemployment rate: 7 in 10 monthly movements
- (d) Participation rate: 9 in 10 monthly movements
- 28 Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.
- **29** Seasonally adjusted series for NSW appear in this publication in Table 2. Trend estimates for NSW and ACT appear in Tables 2 and 21 respectively. Seasonally adjusted data is not available for ACT.

RELIABILITY OF THE ESTIMATES

30 Estimates in this publication are subject to sampling and non-sampling errors. The Technical Note on pages 47–52 of this publication gives information on these sources of error.

RELATED PUBLICATIONS

- **31** Users may also wish to refer to the following related publications which are available from the ABS Bookshop:

ADDITIONAL DATA

32 In addition to the labour force survey, the ABS publishes a wide range of supplementary labour market information. For details see page 39 of this publication.

33 The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

TECHNICAL NOTE ON DATA RELIABILITY

SOURCES OF ERROR

1 There are a number of possible sources of error in sample surveys and these can be classified into two types: sampling error; and non-sampling error.

NON-SAMPLING ERRORS

- 2 Non-sampling errors may arise as a result of errors in the reporting. recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents, errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.
- 3 It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

SAMPLING ERRORS

4 Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard error of estimates

5 One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the standard error (SE). There are about 2 chances in 3 that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range-

$$X - 2 \times SE(X)$$
 to $X + 2 \times SE(X)$

(where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

- 6 In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. * 3.4) to indicate they are subject to high standard errors and should be used with caution.
- 7 The standard error can also be expressed as a percentage of the estimate and this is known as the relative standard error (RSE). The RSE is determined by dividing the standard error of an estimate SE(X) by the estimate X and expressing it as a percentage. That is,

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8 The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

CALCULATING STANDARD **ERRORS**

The methods described below refer to the calculation of standard errors for NSW estimates. Standard errors of ACT estimates should be calculated from Table C, using column 2 (from September 1992) instead of Table Λ and column 3 (Monthly movements for December 1992-January 1993 onwards) instead of Table B.

Measure of reliability to be determined	Metbod
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from Table A by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula. $RSE(X/Y) = \sqrt{\left[RSE(X)\right]^2 - \left[RSE(Y)\right]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

LINEAR INTERPOLATION

- 9 Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In August 1995, there were 639 600 (X_e) employed persons working part-time in New South Wales. This estimate falls between the values 500 000 (X_l) and 1 000 000 (X_u) in Table A.
- 10 The standard error of the estimate is determined as follows. Firstly calculate

$$F = \frac{X_e - X_I}{X_u - X_l}$$
$$= \frac{639600 - 500000}{1000000 - 500000}$$
$$= 0.28$$

11 Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus:

$$SE(X_e) = SE(X_l) + (F \times [SE(X_u) - SE(X_l)])$$
= 8 800 + (0.28 x [11 300 - 8 000])
= 9 500

12 Therefore the standard error of the number of employed persons in August 1995 working part-time in New South Wales (639 600) is 9 500.
